

HATENBOERWATER

Fresh in water since 1906.

Aquality

Drinking water cooler

1200-AQUALITYAB

Aquality is the newest generation drinking water cooler from Hatlenboer-Water. This compact water cooler makes chilled water continuously available. It is connected directly to the drinking water distribution system. The water is chilled directly and hygienic without a buffer tank containing stationary water, which makes it very suitable for the offshore. This makes purchase, storage and replacement of water bottles history. Resulting in a considerable cost saving.

On locations where the drinking water quality is questionable. The cooler can be equipped with a special drinking water filter. This filter removes deposits, improves smell, improves taste and prevents bacterial growth.

The Aquality drinking water cooler is on stock. This model is delivered with a black plastic cap and a skin-plate outer casing.

This stylish water cooler also contains a cup holder.

	Aquality
Capacity	28 l/hour
